MEDICAL IMAGING PROGRAM

OTHER INFORMATION
www.easternhealth.ca

MEDICAL IMAGING

The Medical Imaging Program of Eastern Health is a clinical support program that provides services in the St. John's region, west to Port Blandford, including all communities on the Avalon, Burin and Bonavista Peninsulas.

The Program provides its consumers with quality diagnostic and therapeutic services which assist doctors and other health care professionals in diagnosing illnesses or injuries. Timely and accurate Medical Imaging is used to guide appropriate patient care.

The Medical Imaging Program consists of a team of highly qualified medical professionals. The team includes: technologists, radiologists, nurses, nuclear medicine physicians, radiation safety officers, magnetic resonance safety officer, and medical physicists, along with a wide range of support staff.

The Medical Imaging Program offers the following services:

- Angiography
- Interventional Radiology
- Bone Densitometry
- Computed Tomography (CT)
- Magnetic Resonance Imaging (MRI)
- Mammography
- Nuclear Medicine & PET CT
- Radiography (X-Ray and Fluoroscopy)
- Ultrasound

PACS

All Medical Imaging Departments of Eastern Health use state-of-the-art technology and all digital images are uploaded to province-wide Picture Archiving and Communication System (PACS). This system allows the images to be stored, exchanged, retrieved and managed over a computer network.

To ensure patient privacy and confidentiality, diagnostic images can only be accessed by authorized health care professionals - at any time of day from anywhere in the province through an electronic connection.

WHO REPORTS THE TEST?

Your test results will be reported by a Radiologist or Nuclear Medicine Physician.

Your doctor should receive a signed report within **10 business days**. You should follow-up with your doctor to discuss the results of your test

RADIATION & PATIENT SAFETY

- The Medical Imaging Program continually strives to ensure that precautions are taken to minimize the amount of radiation used to complete required examinations.
- In order to ensure that radiation exposure to patients due to repeat images is within the acceptable standard, repeat rates are monitored monthly.
- Radiation safety policies are in place to ensure appropriate radiation protection practices are applied by all technologists.
- A Regional Medical Imaging Quality Safety Committee meets quarterly to discuss and review quality safety issues and identify opportunities for improvement.
- Preventative maintenance is regularly performed as required on all imaging equipment to ensure optimal image quality and patient safety.
- Imaging equipment is surveyed and registered with the Radiation Division of the Department of Labour at required intervals.
- Quality control is performed and documented as required to monitor equipment performance.
